Fall 1988 Undergraduate Enrollment
Residence by Age Tables

The Residence by Age tables present Fall 1988 undergraduate headcounts by public college and university, city and town and age. The first four tables summarize the information for all universities and colleges, universities, state colleges and community colleges.

The city and town enrollments are reported in descending order and are limited to those fifty most frequently given as place of residence. The enrollment figures are derived from the individual student records in the Research and Planning, Enrollment and Degrees System (RPEDS). The public colleges and universities supply their student enrollment records either by magnetic tape or electronic transfer every fall and spring.

The computer program that generates the tables uses permanent country, state and zip code information recorded at student's admission to the campus. If that is not available, it looks at the student's permanent address at current registration. The result may be a slight bias toward the cities and towns in or near which the campus is situated. Overall, only about 2% of the address information is completely unknown.

The headcounts include students attending both day and division of continuing education classes. City and town reports prior to 1988 included only students in day classes. For some campuses with many continuing education students, particularly many of the community colleges, there will be significant jumps from previous years.

The crosswalk file that is used to match student zip codes to cities and towns has not been fully updated since 1986. Zip code changes for major cities and towns, however, have been recently made to the file.

The percents are based on the total enrollments. Six age groups are offered. These were chosen according to the nature of the data and formatting requirements. About 6% of the age data is unknown. Some students, particularly older students, are often reluctant to give this information. In addition, since the information is self-reported, there may be some incorrect data.

Please refer enquiries about the data to the Office of Research, Information Systems and Assessment at the Board of Regents of Higher Education.
